

Real B2B leads, enriched independently by every provider on the same day, with each returned email checked by a third party. Every row is published below, so the result can be audited rather than trusted.

<https://prospero.io/pricing?coupon=CHRISR50>

LEADS TESTED	PROVIDERS RUN	VERIFIED ANSWERS, ALL PROVIDERS	PROSPEO COVERAGE	PROSPEO DELIVERABILITY
100	8	599	96%	100%

Every lead, drawn as it landed

One tick per lead, in test order. Green means the provider returned an email it stood behind and the verifier confirmed deliverable. Nothing is aggregated or smoothed.

Who won each metric

Providers are ordered by coverage. The leader on each row is marked. Prices are list prices at a \$3,000 yearly commitment, shown per 1,000 contacts with the per-unit price alongside.

Metric	 PROSPEO	 APOLLO	 ROCKETREACH	 SEAMLESS	 LUSHA	 LEADMAGIC	 HUNTER	 ICYPEAS
Global Score Coverage, deliverability and price in one number	 100.0	72.1	60.5	69.6	69.2	70.2	63.9	57.4
Deliverability Of the emails a provider declared valid, how many survived verification	100% 96 / 96	99% 89 / 90	90% 78 / 87	100% 75 / 75	92% 72 / 78	100% 70 / 70	97% 61 / 63	100% 40 / 40
Valid coverage Verified deliverable emails out of all 100 leads	96% 96 emails	89% 89 emails	78% 78 emails	75% 75 emails	72% 72 emails	70% 70 emails	61% 61 emails	40% 40 emails
Dead emails shipped Addresses sold as valid that failed verification	0	1	9	0	6	0	2	0
Mobile coverage Numbers found on the same leads	100% 35 / 35	n/a	n/a	49% 17 / 35	71% 25 / 35	18% 6 / 33	n/a	n/a

Metric	 PROSPEO	 APOLLO	 ROCKETREACH	 SEAMLESS	 LUSHA	 LEADMAGIC	 HUNTER	 ICYPEAS
Price per 1,000 emails List price at a \$3,000 yearly commitment	\$5 \$0.005 each	\$14 \$0.014 each	\$75 \$0.075 each	n/a	\$78 \$0.078 each	\$9 \$0.009 each	\$8 \$0.008 each	\$7 \$0.007 each
Price per 1,000 mobiles List price at a \$3,000 yearly commitment	\$55 \$0.055 each	\$70 \$0.07 each	\$75 \$0.075 each	n/a	\$389 \$0.389 each	\$90 \$0.09 each	n/a	n/a

Try the tool that won this benchmark: 50% off Prospero with code **CHRISR50**

Claim 50% off

Mobile denominators differ because some leads lack the input a provider's phone lookup needs (Prospero 35/35, LeadMagic 6/33, Lusha 25/35, Seamless 17/35 on the same lead panel); the mobile win is decided only among tools measured on the full panel. Weights: valid coverage 40%, deliverability 30%, price 15%, mobile coverage 15%. Fixed before any run is scored and identical for every tool.

METHODOLOGY

How the run was built

Every provider received the identical input for every lead, on the same day, through its own API. No hints, no retries, no second passes. Before enrichment, every lead was given the same resolved company domain and name, so no provider was handicapped by a messier row than its rivals.

100 leads were tested against 8 providers. Counting every provider's answers separately, 599 returned addresses passed the independent verification check.

Of the leads in this run, 100% arrived with a full first and last name and 100% carried a LinkedIn URL. That matters: a provider that requires a full name to search will find less here than one that can work from a first name and a company domain.

What counts as a find

A provider is credited for a lead only when both of these are true.

- 01
The provider itself declared the email valid, using its own confidence label rather than our reading of it.
- 02
BounceBan independently confirmed the address deliverable.

Anything returned without the provider standing behind it is scored separately and never counts either way. That covers extrapolated results, "email found" flags, probable tiers and accept-all scores. These are guesses the provider is honest enough to flag as guesses, so scoring them would be unfair and crediting them would be misleading.

98 Leads at least one provider cracked	2 Leads only Prospero found	2 Leads nobody found
--	---	--

VERIFICATION

Why the verifier can be trusted

A benchmark is only as credible as its referee. Every email here, from every provider, was checked by BounceBan, a third party with no stake in the outcome and no relationship to anyone tested.

And if you still want to argue with the referee

- 01
One referee, one configuration, one run. The same verifier, at the same settings, judged every provider on the same day. Whatever error rate you assume lands on everyone equally, so it cannot reorder the ranking.

BounceBan was calibrated against a control set of addresses known to be live, because each had produced a real reply in a real campaign. BounceBan returned valid on 100% of them.

That matters because of the error it rules out. The one way a verifier can distort a comparison like this is by marking working addresses as dead, which quietly strips coverage from whoever is being tested. On a set where every address was provably working, BounceBan stripped nothing. It does not condemn good email.

02 **There is no headroom above 100%.** Prospeo declared 96 addresses valid and 96 passed. No assumption about the verifier being lenient can raise that. It can only lower everyone else's.

03 **The check is repeatable.** Every address and verdict is printed below. Take any provider's list, run it through a verifier of your choosing, and compare.

THE EVIDENCE

All 100 leads, one row each

Click any row to open the exact address each provider returned, the confidence label it attached, and the verifier's verdict.
